Assessment can be a conversation rather than a final verdict. A short question at the beginning of a lesson reveals what learners already know. A quick response halfway through shows whether an explanation has landed. An exit ticket at the end provides clues about what should be revisited next time.

Suppose a class has practised interpreting charts. Before moving on, the teacher presents two graphs and asks students to identify the more persuasive representation. Learners first choose independently, then explain their decisions to a partner. Their answers reveal not only who is correct, but which assumptions or visual cues shape their reasoning.

Useful formative assessment is focused, low-stakes, and actionable. A method becomes valuable only when its results influence the next instructional choice. The purpose is not to generate more marks, but to notice misunderstandings while there is still time to address them.
