Inclusive learning begins with a practical question: what might prevent someone from participating in this activity? The answer is rarely limited to a single barrier. Instructions may be unclear, a document may not work with a screen reader, or the pace of discussion may leave little time for reflection.

Imagine a course in which students must respond to a complex case study. Some participants think best while speaking; others need a few minutes to draft their ideas. A teacher can preserve the same learning objective while offering several paths into the task: silent reading, small-group discussion, written notes, and a final shared synthesis.

Accessibility should be considered when a lesson is designed, not added only after a problem occurs. Clear headings, meaningful alternative text, readable contrast, flexible participation, and transparent assessment criteria improve the experience for many learners. The goal is not to lower expectations, but to make the route toward those expectations more equitable.

LE LIVRE EN QUELQUES MOTS

Guidelines and practices to make learning environments accessible and welcoming for all students.
