Lecture to Screen

Contenu fictif de test - ne provient pas du livre publié.

A camera changes the rhythm of a lecture. In a classroom, an instructor can read the room, notice hesitation, and decide when to pause. In a recorded lesson, these signals disappear. Structure must therefore do more of the work: short sequences, visible transitions, examples that can stand on their own, and clear guidance about what students should do next.

Start by identifying the purpose of the recording. Is it introducing a concept, demonstrating a procedure, or preparing students for an activity? Each purpose suggests a different format. A five-minute explanation accompanied by a diagram may communicate more effectively than a long recording of a traditional classroom session.

Before pressing record, test the audio, check that text remains readable on a small screen, and remove unnecessary visual distractions. At the end of each segment, add a question or exercise that asks learners to use the idea. A successful digital lecture is not merely watched: it becomes part of a learning process.

LE LIVRE EN QUELQUES MOTS

Adapting traditional lectures for effective online and recorded delivery.
